1. A lot of people are taking a second look at vaccines these days. As someone who's written several books about them, I thought you might enjoy my personal opinion/list of the most interesting unknown facts about vaccines. It's a crazy list!

(Thread)

2. Polio. The paralysis of polio was caused by many different viruses—not just one. It started happening in the 1890s when they started coating everything in a new pesticide. It caused leaky guts & allowed these viruses to reach the spinal cord.

3. Polio ended in the 1950s when they stopped using DDT on children. Like the 1890s pesticide, DDT also caused leaky gut and allowed many different dangerous viruses into the spinal cord, paralyzing many children.

4. There were basically two polio vaccines. The first one was injected and didn't work. The second was taken orally and worked okay. But it had a side effect—polio! This vaccine is currently the largest source of polio/paralysis in the world.

5. Both vaccines targeted the poliovirus. No vaccines were created for the other paralyzing viruses, which is why countries with out-of-control pesticide use (like India) still struggle with childhood paralysis.

6. Vaccines are the leading cause of autism. Scientists and doctors will swear they are not, but it's obvious to anyone who's not afraid to look, it's vaccines. How do we know this? I'll mention two things.

# No Other Serum, German, French or American.

HAS EVER YIELDED SUCH HIGH PERCENTAGES  
OF RECOVERY.

Chicago  
Mortality **4.78** per  
cent.

In Chicago, during the months of November and December, 1898, and January and February, 1899, there were treated with Parke, Davis & Co.'s Antidiphtheritic Serum by the Antitoxin Staff of the Chicago Health Department 418 cases (microscopically verified), with 20 deaths—a mortality of 4.78 per cent.

Denver  
Mortality, **3.5** per  
cent.

In Denver during 1898 there were treated with Parke, Davis & Co.'s Antidiphtheritic Serum 230 cases, with 8 deaths—a mortality of 3.5 per cent.

Physicians prefer our Antidiphtheritic Serum. It will pay you to carry it in stock. Write us for our SPECIAL PROPOSITION. . . . .

## PARKE, DAVIS & COMPANY,

Home Offices and Laboratories, Detroit, Michigan.

Branches in New York, Kansas City, Baltimore, New Orleans, and Montreal, Quebec.

Branch Laboratories, London, Eng., and Walkerville, Ont.

*Kindly mention AMERICAN DRUGGIST when writing to Advertisers.*

7. There are thousands and thousands of parents whose children developed autistic symptoms directly after their vaccines—within hours. Sometimes before they got home from the doctor's offices. This has been documented, often with video proof, over and over.

8. Autism began appearing in the 1930s in the U.S., directly after aluminum was added to the single pediatric vaccine children received at that time. Another country made this change: Austria. Autism began to appear there as well.

9. You'll hear the MSM say the autism/vaccine link has been studied & debunked over & over, but it hasn't—It's never been studied. They looked at one vaccine & one ingredient: MMR/mercury. They've never looked at

aluminum & they never studied all the childhood vaccines together.

The screenshot shows a web browser window with the URL <https://www.healthychildren.org/English/safety-prevention/immuniz...>. The page header includes 'OUR SPONSORS', 'en ESPAÑOL', and the American Academy of Pediatrics logo. The main content area features the 'healthychildren.org' logo and a search bar. Below the logo, there are navigation links for 'Safety & Prevention', 'Immunizations', 'All Around', 'At Home', and 'At Play'. A video player is embedded on the page, displaying the title 'Vaccine Safety: Examine the Evidence' and a progress bar at 0:00 / 0:49. The video player also includes a 'LISTEN' button, a 'Español' language option, and social media sharing icons for EMAIL, PRINT, SHARE, Facebook, Twitter, Google+, and Pinterest.

10. You'll hear that Dr. Andrew Wakefield's autism/vaccines paper was retracted. That paper looked at the connection between gut illness & children with autism. It specifically said it found no association between vaccines & autism. Why was it retracted then?

The screenshot shows the 'Early report' section of the paper. The title is 'Ileal-lymphoid-nodular hyperplasia, non-specific colitis, and pervasive developmental disorder in children'. The authors listed are A J Wakefield, S H Murch, A Anthony, J Linnell, D M Casson, M Malik, M Berelowitz, A P Dhillon, M A Thomson, P Harvey, A Valentine, S E Davies, and J A Walker-Smith. The 'Summary' section states: 'Background We investigated a consecutive series of children with chronic enterocolitis and regressive developmental disorder. Methods 12 children (mean age 6 years [range 3-10], 11 boys) were referred to a paediatric gastroenterology unit with a history of normal development followed by loss of acquired skills, including language, together with diarrhoea and abdominal pain. Children underwent gastroenterological, neurological, and developmental assessment and review of developmental records. Ileocolonoscopy and biopsy sampling, magnetic-resonance imaging (MRI), electroencephalography (EEG), and lumbar puncture were done under sedation. Barium follow-through'.

We **did not prove** an association between measles, mumps, and rubella vaccine and the syndrome described.

11. Because parents started getting suspicious, Wakefield and the other dozen authors of the paper became targets of the medical establishment. The result was the longest, most expensive medical court proceeding in the history of the U.K.

It was a sham. He was the scapegoat.

12. The Wakefield paper wasn't retracted due to fraudulent data, despite what people say. The data wasn't generated or interpreted by Wakefield anyway. He lost his medical license on a technicality—obtaining control samples of blood from healthy children in an unapproved way.

13. Smallpox. Many people credit the smallpox vaccine with eradicating smallpox. This is the only human disease which vaccines even receive that credit, by the way. Polio, measles, and every other illness is still out there.

14. Smallpox was a horrible vaccine. Only a small percentage of the world ever received it and it was stopped being given because the side effects were so horrible and frequent—not because the disease was declared eradicated.

You can look up pictures of the side effects.

15. Scientists don't currently even know what's in the smallpox vaccine. It's been grown in so many different animal species that they can't even identify what exactly it is anymore. It has been this way for a long time. No other vaccine works like this.

16. You will hear that smallpox only exists in two laboratories in the U.S. and Russia (as a safeguard against future biological attack—makes sense), but the reality is its virologic descendants probably exist throughout the world—we just don't even know it.

17. Vaccines have brought with them many other problems. Eczema. Food allergies. Autoimmune disorders. Other neurological problems—all of these illnesses which didn't appear to exist before the advent of widespread childhood vaccinations.

18. Vaccines are not treated as drugs by the government. As a result, they are not safety tested in the same way. A typical drug might be studied for months or years. Vaccines may be monitored for side-effects for as little as 48 hours.

19. Vaccines aren't tested against truly inert placebos. They're tested against OTHER VACCINES! That's how they compare how safe a vaccine is—by determining if it's as safe as another vaccine! Crazy but true.

20. The entire childhood vaccine schedule has never been safety tested. Each vaccine is tested in the ridiculously lax method I just described, but never together the way other drug interactions might be studied.

21. Flu and Tdap shots which are recommended to pregnant women have never been safety tested on pregnant women. Why? It's too DANGEROUS. So rather than safety test them, they just administer them and hope for the best. You are the guinea pig.

22. Vaccine manufacturers made a deal with the government in 1986 & can't be sued. There is no other business in the world that has this deal. You have to sue the gov't if something happens, & guess who pays for damages? Not pharma! You do! Through a per-vaccine fee.

23. SIDS, or Sudden Infant Death Syndrome, are babies who die from their vaccines. Of course no one wants to say that, so they call it unexplained. It doesn't matter if perfectly health twin babies died the night after their shots, doctors will say "We don't know what happened."

24. Vaccines routinely cause cranial nerve damage that is visible as asymmetry on your face. Crooked smiles and misaligned eyes are the most easily-recognized symptoms.

25. Other commonly visible vaccine problems: a droopy mouth & torticollis, when a baby can't hold their head straight. There are many others I cover in my book, *Crooked: Man-made Disease Explained*. It's a fascinating and horrible phenomenon - once you see it, you can't unsee it.

26. Before I list some other common unknown facts about vaccines, I'll list some books real quick. "Unvaccinated" is a short, little book that describes why growing numbers of parents are choosing natural immunity for their children:

[amazon.com/dp/1722908696/](https://www.amazon.com/dp/1722908696/)

27. The true story about polio is fascinating if you've never heard it. I have a book called "The Moth in the Iron Lung" that describes it like a detective novel—it's a fairly popular book:

[amazon.com/dp/1717583679/](https://www.amazon.com/dp/1717583679/)

Super easy to read.

28. Here's the book about Crooked faces and many other neurological and autoimmune issues: Lyme, Chronic Fatigue, Lupus, POTS, etc.:

[amazon.com/dp/1983816620/](https://www.amazon.com/dp/1983816620/)

29. Here is a longer explanation of the Polio story within a Tweet thread. It doesn't do "The Moth" justice, but if you're interested, it is fascinating:

31. Much of my vaccine-related research is contained within a nearly 3-hour video that will blow your mind. I don't want to link the YouTube video directly as it may be deleted at anytime, but it's currently at the bottom of this page:

[areyoucrooked.com](https://www.areyoucrooked.com)

32. Okay, more interesting facts about vaccines. Many people believe that AIDS originated from an experimental polio vaccine administered in the Congo. This may seem crazy, but vaccines are routinely cultured in animal tissue. Problems happen when animal viruses get into humans.

33. There are 2 HIV strains. Not one, but two. They both got into humans around the same time. How did this seemingly impossible coincidence take place? This map showing where the experimental polio vaccine was administered + initial reports of AIDS might explain it.

34. If you think there's no chance this could've happened, it's happened before. Bernice Eddy discovered the polio vaccine in America was tainted with SV40, a virus that was causing cancer.

SV = Simian Virus.

40 = They had already discovered 39 other ones.

I want to explain why so many in government, tech, public health, pharma, and philanthropy are SO dedicated to pushing the coronavirus vaccine, no matter what. Got a minute?

If you haven't noticed, all rational thought seems to have left the planet. Governments, health officials, technology companies, and everyone else are pushing an experimental medical therapy—the coronavirus vaccine—on anything with two legs.

Elon Musk recently admitted in his Saturday Night Live appearance that he was diagnosed with Asperger syndrome. How does his face line up with my Smile Difference theory—which suggests that autism & Asperger's are asymmetrical brainstem injuries? You may be surprised. (Thread)

Here's the entire 17-minute video explaining the Smile Difference if you haven't already seen it. It's fascinating.

Recall that Asperger syndrome is, according to my theory...

It's just a mask? It's just two weeks. It's just non-essential

This is from a book published in 1910. Comet Ping Pong?

This is also from a book published in 1910. Sound like someone familiar?

Read 8 tweets

It's just until cases go down more. It's just to keep others from being scared. It's just for a few more weeks.

It's just communion or singing. You can still meet. It's just until we get a vaccine. It's just a few side effects. It's just a bracelet. It's just to let people know you're safe to be around. It's just for the coronavirus vaccine.

Vaccine manufacturers cannot be sued for killing your child with their products. You have to sue the government instead.

No other industry anywhere has this kind of protection. Ask yourself why.

You can, however, sue vaccine manufacturers for injury from non-pediatric shots. B/c some coronavirus vaccines may be classified as gene therapy rather than shots, & MANY adults will take them... ..they won't be administered until manufacturers are protected with NEW laws

1. A couple of dirty little secrets about how vaccines are typically made and tested. If you've never studied how

vaccines work, these may surprise you. If you're waiting to leave your house until a coronavirus vaccine, it's probably not going to sound encouraging. (Thread)

2. New vaccines are typically tested on animals first. Obviously, vaccines can cause lifelong problems, so it makes sense to not test them on humans. Unfortunately, these tests don't really tell us if the vaccines WORK just how often they
